

# SEE WHAT YOU'VE BEEN MISSING.

We passionately pursue advanced, innovative technologies that help golfers of all abilities find more enjoyment from the game. Our mission now extends to Sungear – introducing the ONLY sunglasses designed specifically for golf! Our new Sungear will provide the visual performance and protection you would expect, however; our technology and designs were developed with one fundamental goal in mind...to maximize your ability to read greens, find the right line, make more putts and lower your scores!

## LENS TECHNOLOGY: How it Works

- Contrary to conventional thinking, our lenses actually let in more light [twice as much] than ordinary sunglasses.
- More light means better depth perception, especially helpful around the greens when reading putts and chips.
- However, more light means more glare, so we added a polarizing filter to counter this effect. Then added a blue-green flash mirror to better manage confusing short wavelength light
- Finally, we designed lightweight frames that maximize adjustability, comfort and protection while fully exploiting the benefits of our technologically-advanced lenses

### Lens Color Options:

GRAY LENS +  
GREEN MIRROR

BROWN LENS +  
BLUE MIRROR

BROWN LENS

GRAY LENS

Compare our lens against any other sunglass... and See What You've Been Missing!
